Pixall CP100

fresh market corn harvester

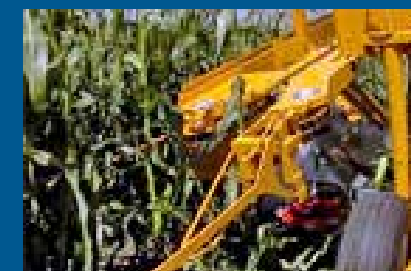

Premium product quality: Harvest fresh market sweet corn with the efficient CP100

Convenient pull-type harvester:

The CP100 provides gentle harvesting in a one-row tractor drawn model. Picking hundreds of cases of quality sweet corn is as easy as starting your tractor.

Hand picked action:

Ears are gently "pulled" off stalks, imitating hand picking action, and are dropped a short distance to a soft rubber conveyor, eliminating mechanical damage.

Pixall™ CP100

Since its introduction in 1994, the Pixall™ CP100 Corn Puller has made it possible for fresh market growers to deliver mechanically harvested, top quality sweet corn for supermarket and road-side sales.

The CP100 provides its gentle harvesting technique in a one-row, tractor drawn model.

High volume picking capacity

- The CP100 allows you to deliver a steady supply of damage-free fresh market sweet corn as you need it
- The CP100 can pick at a rate of up to 600 dozen ears or more per hour
- Easily delivers hundreds of cases of sweet corn on a moment's notice with no picking crew to worry about
- Fast payback from reduced labor costs

- Fast, high volume picking while maintaining the appealing dark green color and the long shank

Delivers premium quality

- The CP100 Corn Puller utilizes a gentle pulling action that imitates hand picking
- Virtually eliminates damage
- Retains all outer flag leaves, all the way down to the end of the shank
- No aggressive stalk rolls, stop plates, or blades to damage delicate sweet corn
- Stalks are gripped at the top by rubber belts and are severed near the ground by rotating blades
- Two hydraulically driven rollers gently pull ears off the stalk
- Take advantage of the productivity of mechanical harvesting without sacrificing sweet corn quality

Gentle handling: No aggressive stalk rolls. Just gentle rubber belts to grip the stalks, and two hydraulically driven rollers to gently pull the ears off the stalks.

Effective cleaning: The CP100 features an on-board cleaning system.

Loading versatility: Load to the left, right, or rear, the choice is yours! A full 180 degrees of rotation on the conveyor makes harvest quick and easy.
